### 1. Client Requirements:

What our client wants us to make is a journal wherein she could address her personal experiences through writing and pictures chronologically arranged by date. The background to this proposal is that, since she just graduated, she wants to keep all the memories that she kept in her mobile device into her laptop since it is eating memory. She asked us to make it only available only to her laptop since she don't intend to share it to anyone else but with herself and her loved ones. She did not specify any security check so on our second interview we opened it up to her. These logs should be accessible by panning through by days, months, and years. The client also requests that the overall aesthetic should be as minimalistic as possible with a color palette revolving around black, white, and gray compared to the likes available at the market. In terms of functionality, she mentioned to include the ability to add photos for each entry she would create, she also mentioned adding hashtags to make it more personal. Since a journal should always be kept private, the group decided to add a PIN to prevent other people from prying into the client's personal entries.

### 2. Use Case Diagrams:

### 3. Activity Diagrams:

#### a.) Create New Entry -

b.) Edit Existing Entry -

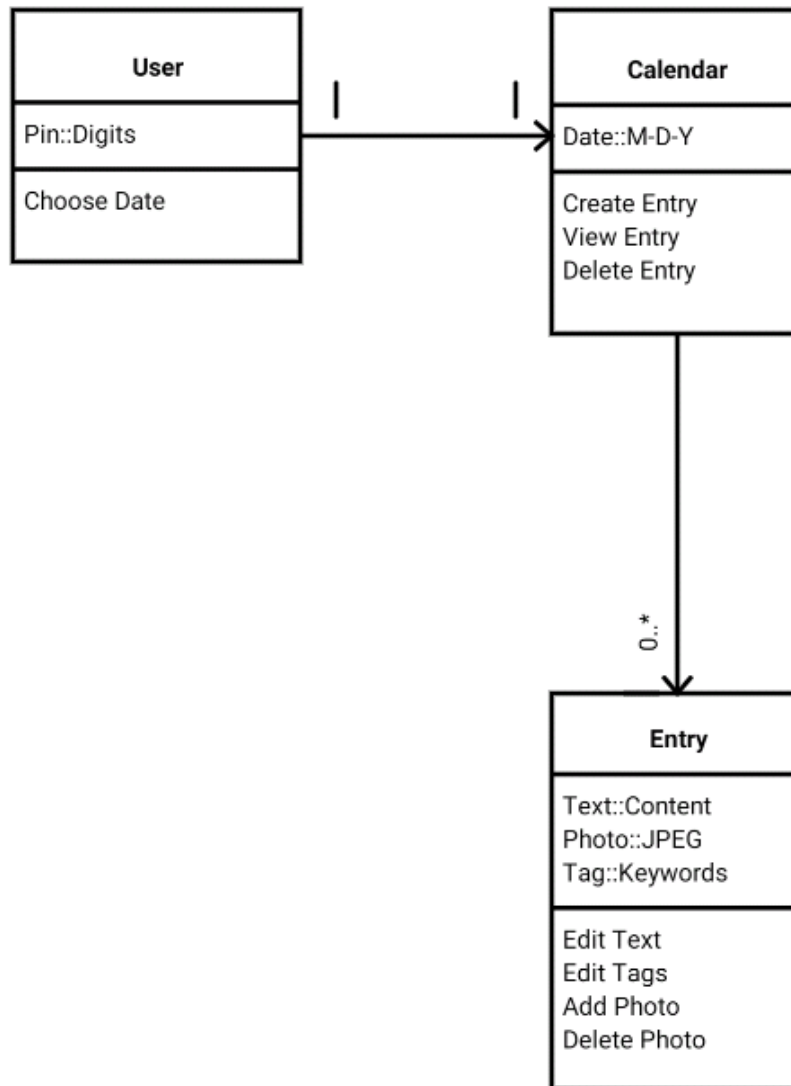

c.) Delete Entry –

10

d.) Change PIN
